# 三相永磁同步高效节能电机

Three-phase Permanent Magnet Synchronous High Efficiency Motor

OUR MOTION IS YOUR PROFIT

我们的传动为您创造利润

欧瑞京电机有限公司是由近百年电机技术积累的荷兰 PEJA 集团在华投资建设的合资公司，占地面积 65 亩，拥有现代化厂房 30000 平米。公司成立于 2010 年 4 月 6 日，注册资本 10000 万元人民币,总投资约 2 亿元。现有员工 400 多人。

工厂聚焦于各类高效节能电机及特种电机、高压电机等领域，产品线涵盖永磁同步电机，大中型 IEC 高效、NEMA 高效、超高效电动机及变频、高压、船用、矿山、水泥、港机、冶金、造纸等特种应用电机，电机中心高范围 H56mm~H800mm，功率范围 0.18~6000KW，为各行业客户提供一站式电机技术服务和采购服务。永磁电机因其突出的节能效果已为越来越多的行业所认可，目前已广泛应用于拉丝机、塑机、橡胶、纺织，空压机、水泵、造纸、冶金、粉碎、水泥等领域。

工厂立足于依靠科技进步和人才战略，引入业内资深技术人员和管理团队，现有中高级工程技术人员 40 余人，占员工总数 10%。

公司的使命为：让传动更高效。

Wuxi Original Mechanical & Electrical Co.(OMEc) is a Joint Venture invested by PEJA group from the Netherlands in 2010, with the total investment of 200M RMB. OMEC China covers an area of 40000 m<sup>2</sup>, and has more than 400 staff.

OMEc focus on various kinds of high efficiency motors, medium & high voltage motor, and special application motor, including applications for frequency drive, marine & offshore, mining, harbor crane, cement, metallurgical, paper making, etc. We offer one-stop purchase and technology service with our wide range products from frame sizes H56~H800, the rating from 0.18kw~6000kw, and experienced engineering team, know-how manufacturing.

PM motors are more and more popular in various application, like drawbench, plastic, rubber, textile , compressor, pump,metallurgy,crushing,cement etc., due to its outstanding energy saving.

OMEc build up the vision as ‘Drive the world more efficiently’ , with the strong support from our R&D team and experienced management team.

永磁汽车电机  
PM motor for Vehicle

纺织/印染永磁自启动电机  
PM motor with self starting cage  
for Textile/printing machine

永磁拉丝机电机  
PM motor for drawbench

低速直驱  
PM motor with Low speed and  
large torque

通用型永磁电机  
PM motor for general purpose

1.5KW 永磁风力发电机  
PM motor for wind generator

## 概述 Overview

超过 IE4 效率标准的 OMP 系列超高效节能永磁同步电机，采用高性能稀土永磁材料和变频技术，无编码器矢量控制运行，内插磁钢结构，具有节能省电，高效、运行可靠、安装互换性好的优点。

OMP series high efficiency energy-saving permanent magnet synchronous motor(IE4 and higher) adopts high performance rare earth permanent magnetic material and frequency inverter technique with vector control, which has the advantages of energy saving, reliable operation and good compatible.

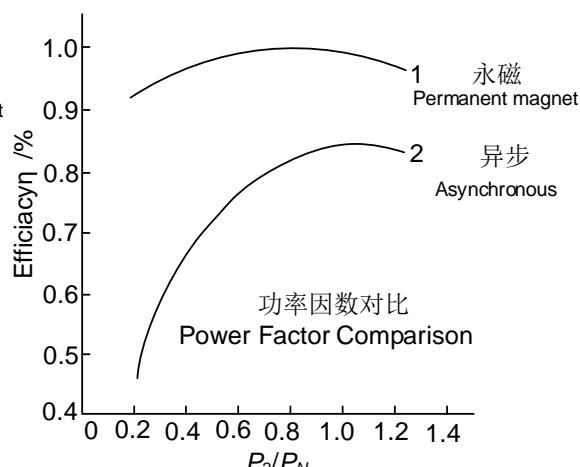

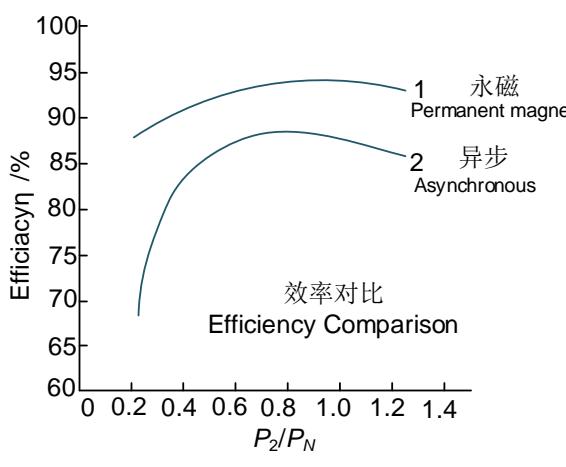

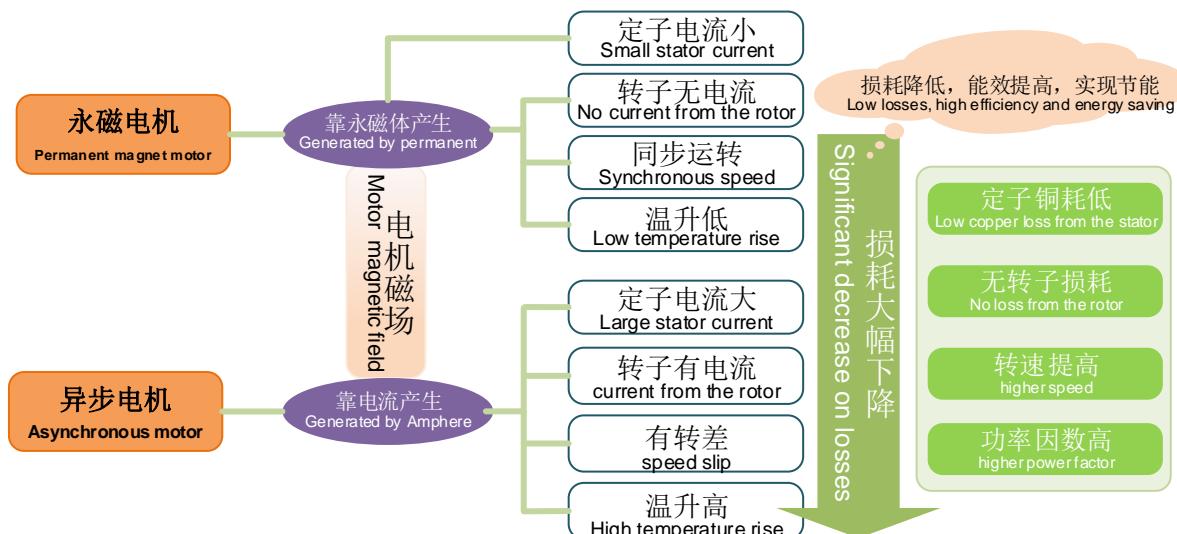

## 主要特点 Main features

- 该系列产品的效率指标符合 GB 30253-2013《永磁同步电动机能效限定值及能效等级》的 1 级标准，达到国际标准 IEC60034-2014 中 IE4/IE5 效率。The efficiency conforms to Grade 1 of GB 30253-2013 Energy Efficiency Limit Value and IE4/IE5 efficiency of international standard IEC60034-2014.
- 该系列产品基本转速为 750~3000rpm, 功率由 1.5kW~450kW, SF=1.2, 可衍生出转速范围 80~10000rpm 的变频永磁同步电动机以及自启动永磁电机。The basic design is 750~3000rpm with rated power of 1.5kW~450kW, providing service factor of 1.2, which also available on request for rotation speed of 80~10000rpm and self-starting PM motor

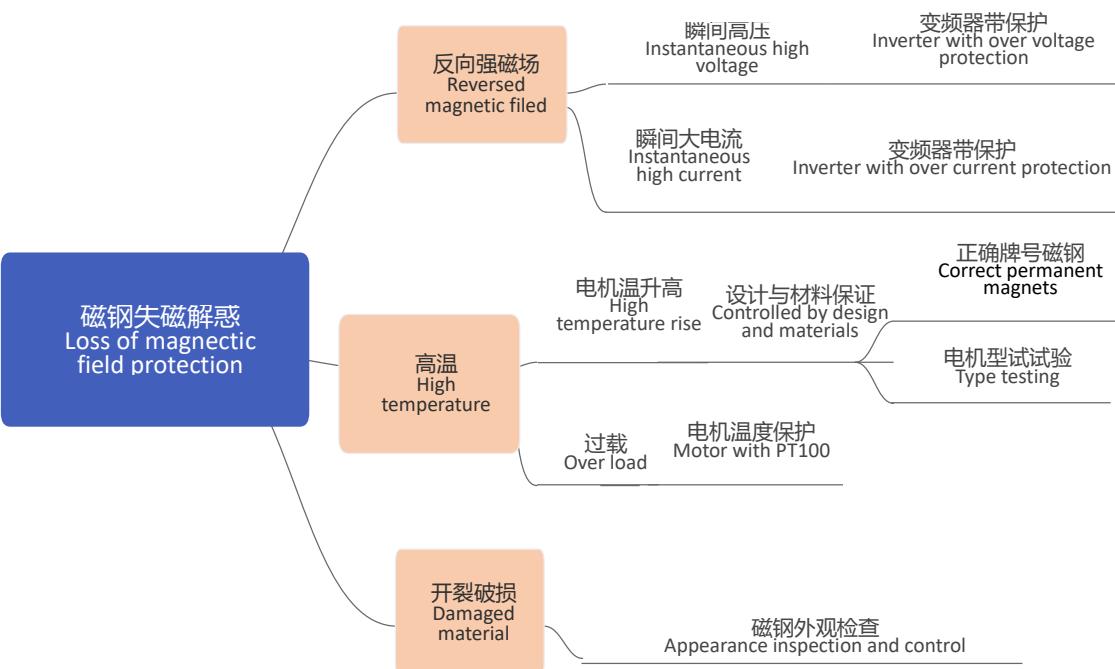

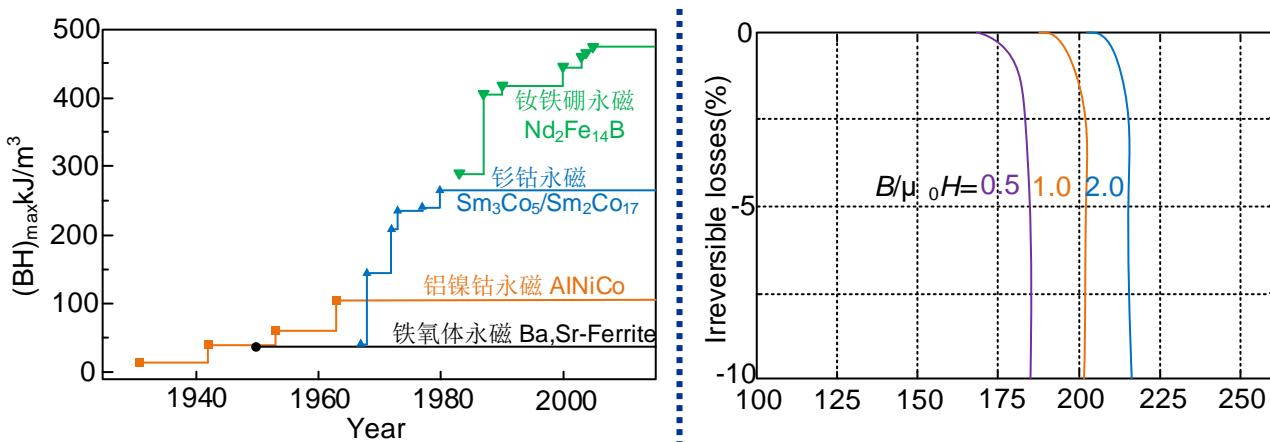

## 永磁电机与异步电机的特性对比

### Comparison of PM motor and Asynchronous motor

## 永磁同步电动机的可靠性和稳定性 Reliability and stability of PMSM

1. 电机采用高性能的钕铁硼永磁材料  
The motor adopts high performance NdFeB permanent magnet.
2. 选用耐温较高的磁钢牌号（耐温可达 155 度、200 度），确保电机即使适度过载或较高环境温度时仍能稳定使用而不会退磁（电机温升为 B 级）。【注：特殊应用选型请联系我们】  
It selects the high temperature resistant magnet material to ensure the stable use of electric motor even under the condition of service factor and higher ambient temperature (The temperature rise of the motor is B class).
3. 电机与变频器均带热保护元件。  
The motor and frequency converter are both equipped with thermal protection components.

## 永磁与异步 KPI 对比

特点 Characteristic	异步电机 Asynchronous motor	永磁电机 Permanent magnet motor
效率 Efficiency	低 Low~High	最高 Super High
功率因数 Power factor	低, 无功电流大, 加大了电网负荷, 有时需增加电补偿器。 Low PF, and with large inactive current. PF compensator capacitor could be needed.	最高, 无转子感应电流, 电网中不需安装补偿器 Highest PF, no need for PF compensator.
控制特性 Control characteristics	差 Poor	好 Good
体积 Volume	大 Large	小, 正常缩小两个中心高, 重量轻, 约相当于同功率异步电机重量的 60%。 Small, usually two frame sizes of reduction, light weight, equivalent to 60% of the weight of the asynchronous motor with same rating.
启动性能 Start performance	工频电直接启, 起动电流大, 对电网有冲击, 不允许多次启停 Direct one line starting, large starting current, has impact to the electricity grid, and frequent starts are not allowed.	变频, 恒转矩启动, 允许多次启停 Frequency drive, constant torque start, frequent starts are allowed.
转子结构 Rotator structure	简单, 鼠笼 Simple, squirrel cage	复杂, 内贴或表贴磁钢 Complex, in-slot or surface sticking of magnetic steel.
总成本 Total cost	初期投入少, 后期用电多, 总成本高 Low purchase cost but with large amount of electricity consumption in the later stage, high total cost.	初期投入贵, 后期比异步省电, 总成本低, 运行 200 天可回差价。 Relative higher purchase cost however with lower total cost from the saving on electricity during operation. The return of price difference is about 100 operation days.

举例说明(按 0.5 元/度计算, 22KW 永磁电机运行 200 天可节电 1900 元, 相当于 200 天收回电机采购价差)  
 Example (The 22KW PM motor can save 1900 RMB on electricity during 200 operation days, calculated by 0.5RMB/ kWh, which is equivalent to the return of 200 days on purchase price difference.)

型号 Type	功率 Power	频率 Frequency	电压 Voltage	电流 Current	效率% Efficiency			功率因数 PF			以数量 1 台, 连续运行 200 天节电 (度) Saving on electricity for 1pc of 22kw PM motor during operation for 100 days (KWH)	
					恒转矩转速 Constant torque speed			负荷 (%) Load (%)				
					3000	2100	900	100	50	25		
OMP22-160	22	100	370	38.3	94.4	94	90.3	0.95	0.95	0.95	1899	
IE2-180M-2	22	50	380	41.1	91.3	89.5	79.4	0.89	0.89	0.89		
IE3-180M-2	22	50	380	40.5	92.7	91.2	83	0.89	0.89	0.89	873	

以上纯属效率提升带来的节电效益, 不包括变频降速带来的节能, 以风机负载为例的变频节电详见下图  
 The above are the saving brought by efficiency improvement, excluding the additional saving from the extreme low efficiency by frequency drive on low speed operation of an asynchronous motor. See the figure below for the example of ventilator application.

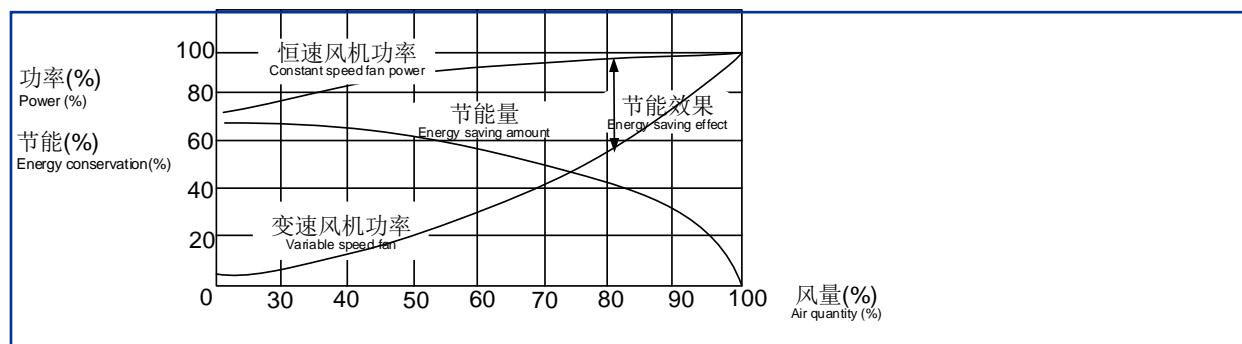

转速 n% RPM (n%)	风量(Q%) Fluid Load (Q%)	频率 Frequency	风压 F% Wind pressure	轴功率 P% Shaft power (P%)
100	100	50	100	100
90	90	45	81	72.9
80	80	40	64	51.2
70	70	35	49	34.3
60	60	30	36	21.6
50	50	25	25	12.5

显然, 变频控制系统的节能效果是十分突出的, 请见下图的比较曲线。

当风机效率一定, 调节风量微小的变化时, 转速可成比例下降, 则风机的轴功率成立方关系下降。在满足工艺要求的前提下, 若风机转速有富余 10%, 将可节省电耗 27.1%, 若风机的转速富余 20%, 将可节省电耗 48.8%。由此可见, 风机、水泵类负载, 其节电效果将是非常明显。

Obviously, there is significant energy saving for variable air volume control system. See Figure as below.

The rotation speed declines in proportion with a certain fan volume adjustment and the shaft power declines with cubic relation. On the premise of the engineering requirements, it can save the electricity consumption of about 27.1% if the fan rotation speed is 10% higher, and it can save the electricity consumption of about 48.8% if fan rotation speed is 20% higher. There are significant energy savings fan and pump applications.

See the performance table for detail.

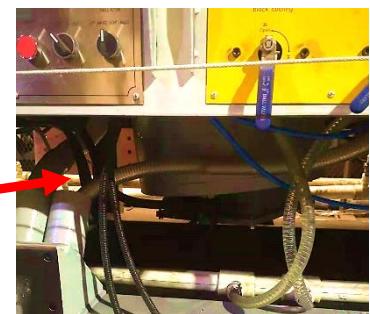

## 典型节能改造案例 Typical energy saving reconstruction cases

### 一、钻房集尘风机改造案例

用电负荷	1日	2日	3日	4日	5日	6日	7日	8日	9日
9#集尘机改造前原电机 AC 100HP 75KW-4 极	1061	1071	1071	1071	1071	1071	1071	1073	1075
9#集尘机改造后：永磁 OMP-250-1500r/min	928	969	929	948	937	938	944	915	904
节电率	13%	10%	13%	11%	13%	12%	12%	15%	16%

### 二、拉线机直驱改造案例

线径	重量 (吨)	用卷 筒数	砂带机	开始 时间	结束 时间	用时	开始 电量	结束 电量	用电量	吨电耗	小时 产量	备注
2.23	3.2	7	开	23:40	2:40	3 小时	13591	13940	349	109.0625	1.070	改造前异步
2.23	6	7	开	8:00	13:25	5.5 小时	14930	15467	537	89.5	1.14	改造后永磁直驱，去除减速机

➤ 改造前：

1. 异步+减速箱
2. 异步+速比皮带轮

➤ 改造后：

永磁直驱，取消减速箱及皮带轮

➤ 效果

1. 节电数据。（8%~15%，视拉丝头）
2. 免维护（可常年不停机，无需换皮带）
3. 噪声及振动变小了，只有卷筒声音。
4. 反映速度也会变快，启动同步，减少断线机率，产量提升。
5. 空间变小，**电机直接装在卷筒下面**，减少了1/3的占地，原空间可多放设备，从而实现一人多机，减少人工。

### 三、运煤皮带机改造案例

贵州运煤皮带机改造，用永磁直驱代替，取消减速箱，  
节电 **21%**

### 四、句容华电改造案例

句容华电改造换成永磁直驱，去除减速机，节电率 **18.5%**

### 五、水泵异步改造永磁案例

- 白俄 40 万吨纸浆厂水泵及化工泵改造，换成永磁，平均节电 **9.7%**

## 六、新疆电厂引风机 800KW 高压改造案例

## 七、浙江电厂改造案例

## 八、球磨机改造案例，节电率达 8%

OUR MOTION IS YOUR PROFIT

我们的传动为您创造利润

我们能为您提供一站式的节能服务，从节能方案制订，产品制造（变频器，电机），安装以及售后服务。

We provide one-stop energy saving solution, with package of consulting, high efficiency motor and inverter.

无锡欧瑞京电机有限公司

Wuxi Original Mechanical & Electrical Co.,Ltd.

工厂地址：江苏省无锡市惠山区阳山镇陆戴陆 8 号

**Address:** No.8 Ludai Road, Yangshan Town, Huishan District, Wuxi City, Jiangsu, China

销售&技术办公室：江苏省滨湖区绣溪路 53 号旭天科技园 17 号楼 301 室&401 室

**Sales, R&D:** No. 53 Xiuxi Road, Block 17, Xutian Park, Binhu District, Jiangsu, China
